

Problème métier

Signalements dispersés | Priorisation difficile | Suivi terrain incomplet

Utilisateurs et besoins

Citoyen | Agent | Manager | Admin

Avant / Après EcoTrack

Avant : signalement isolé. Après : boucle suivie.

Solution EcoTrack - boucle produit

Signaler → API → prioriser → planifier → valider → tracer

Ma contribution Développement

Contribution full-stack : web, mobile, API, database, tests, CI/CD, docs

Périmètre soutenance

Présenté dans cette soutenance | Perspectives d'évolution

Scénario de démonstration

API terminal proof

Captures locales sur la base de demo soutenance - tokens masques

```
$ curl -s http://localhost:3001/api/health/ready
HTTP 200 | ready=ok | database=ready
$ curl -s http://localhost:3001/api/zones?page=1&pageSize=6
HTTP 200 | zones=6 | sample=Paris 10e - Entrepot, Paris 11e - Popincourt, Paris 12e - Reuilly
$ curl -s -X POST /api/citizen/reports -H "Authorization: Bearer <citizen-token>"
HTTP 201 | report=454f60d3 | status=submitted | container=SOUT-C-002
$ curl -s /api/citizen-reports -H "Authorization: Bearer <manager-token>"
HTTP 200 | visibleReports=5 | firstStatus=submitted
$ curl -s /api/dashboard -H "Authorization: Bearer <manager-token>"
HTTP 200 | tickets.total=11 | open=8 | completed=3
$ curl -s /api/tours/agent/me -H "Authorization: Bearer <agent-token>"
HTTP 200 | tour=Soutenance - Tournee Centre Nord live | stops=4 | status=in_progress
```

Citoyen → API → manager → agent

Monorepo & responsabilités

Organisation par couche

Monorepo proof

Responsabilités par couche dans le repository EcoTrack

```
EcoTrack/  
app/ React web UI, routes, state, API consumption  
mobile/ Expo / React Native field-oriented UI  
api/ NestJS Controller -> Service -> Repository  
database/ Drizzle schema, migrations, soutenance seed  
infrastructure/ Docker, CI/CD scripts, validation tooling  
docs/ architecture, runbooks, proof portal material  
.github/ CI, CD, docs-pages workflows
```

High-level architecture

Web/Mobile → API → Services → Repositories → PostgreSQL

Backend architecture

Controller → Service → Repository

REST API & endpoints vérifiés

API terminal proof

Captures locales sur la base de demo soutenance - tokens masques

```
$ curl -s http://localhost:3001/api/health/ready
HTTP 200 | ready=ok | database=ready
$ curl -s http://localhost:3001/api/zones?page=1&pageSize=6
HTTP 200 | zones=6 | sample=Paris 10e - Entrepot, Paris 11e - Popincourt, Paris 12e - Reuilly
$ curl -s -X POST /api/citizen/reports -H "Authorization: Bearer <citizen-token>"
HTTP 201 | report=454f60d3 | status=submitted | container=SOUT-C-002
$ curl -s /api/citizen-reports -H "Authorization: Bearer <manager-token>"

EcoTrack Documentation

EcoTrack est un projet de gestion et de coordination de signalements, tournées et opérations liées aux déchets urbains. Ce portail regroupe la documentation technique, les guides produit, les runbooks et le dossier de preuves Bloc A2 destiné au jury.

[Parcourir la documentation complète](#)[Consulter le dossier de preuves - Bloc A2](#)[Voir le repository GitHub](#)[Voir l'application déployée](#)

L'URL applicative ci-dessus est référencée dans les notes de déploiement existantes. Les preuves de validation associées restent à rattacher dans le dossier Bloc A2.

Sections principales

Section	Objectif	Entrée
Documentation complète	Index maintenable de tous les fichiers documentaires.	Documentation index
Dossier de preuves Bloc A2	Matrice de preuves et pages d'évidence pour le jury.	Dossier Bloc A2
Architecture	Architecture logicielle, découpage monorepo et décisions techniques.	Architecture overview
API	Contrats REST, OpenAPI et comportements par domaine.	API documentation
Produit	Routes web, guides rôle et notes fonctionnelles.	Frontend routes
Environnement	Configuration locale, Docker, variables et décisions d'environnement.	Environment setup
Gouvernance	Sécurité, qualité, conventions et définition de terminé.	Quality scorecard

Responsible digital

Conclusion

EcoTrack est structurée, testée, déployée et documentée.

Annexe A3 — Dashboard manager

Annexe A4 — Planning & administration

The screenshot displays the 'Tour Planning Wizard' interface within a dark-themed application. On the left, a sidebar contains navigation links: 'Role Hub', 'Manager Dashboard', 'Tour Planning' (highlighted), and 'Tour Operations'. At the bottom of the sidebar are 'Settings' and 'Support' links. The main content area is titled 'Tour Planning Wizard' and includes a descriptive paragraph. Below this, there are four input fields: 'Tour name' (containing 'Daily Optimized Tour'), 'Scheduled date/time' (containing '06/29/2026, 03:40 PM' with a calendar icon), 'Zone' (a dropdown menu showing 'Select zone'), and 'Fill threshold (%)' (containing '70'). An 'Assign agent' section follows, with a dropdown menu showing 'Select zone first' and a note: 'Select a zone first to see assignable agents.' At the bottom of the form are three buttons: 'Run Optimization' (highlighted in blue), 'Create Planned Tour', and 'Rebuild Stored Route'. Below the form is a section titled 'Optimized Route' with the text: 'Run optimization to generate candidate route order.'

Tour Planning Wizard

Use the primary manager desktop planner to turn citizen-driven demand and supporting context into a route plan. The planning service applies nearest-neighbor plus 2-opt from the selected zone depot, then tour creation persists the resulting route.

Tour name

Daily Optimized Tour

Scheduled date/time

06/29/2026, 03:40 PM

Uses your local time and also avoids containers already reserved on nearby tours for the selected schedule.

Zone

Select zone

Fill threshold (%)

70

Assign agent

Select zone first

Select a zone first to see assignable agents.

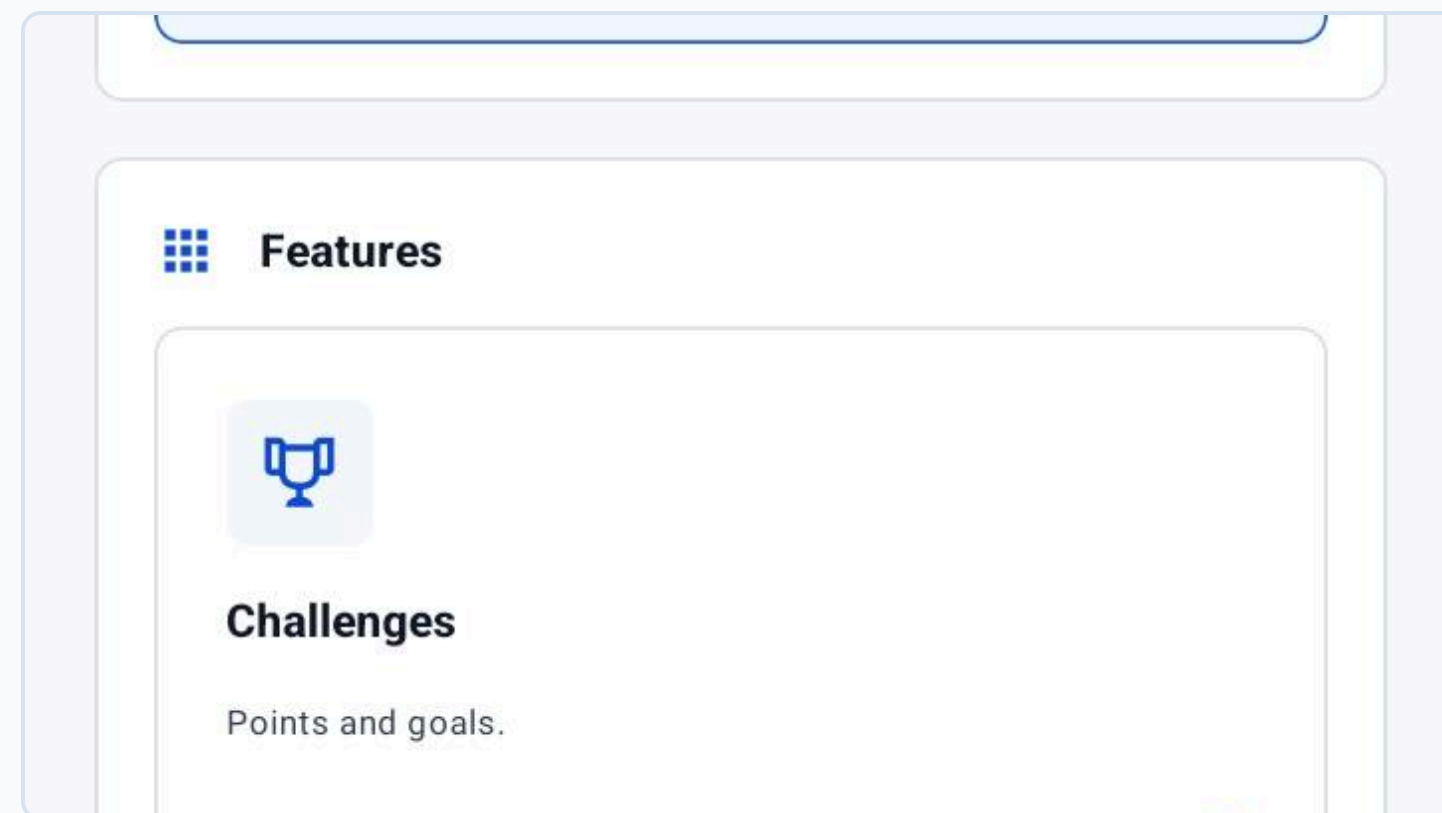

Run Optimization **Create Planned Tour** **Rebuild Stored Route**

Optimized Route

Run optimization to generate candidate route order.
